ADAPTIVE CONTROL

Adaptive control of discrete systems using neural networks p526
Adaptive control of dominant time delay systems via polynomial identification p433
Analysis, modelling-and control of an advanced automotive self-levelling suspension system *p129*
BPD computation and model reference adaptive control (MRAC) of Hammerstein plants p475
Developing a neurocompensator for the adaptive control of robots p562
Direct neural control system: nonlinear extension of adaptive control p661
Genetic algorithms for fuzzy control.2. Online system development and application *p177*
Heterogeneous and homogeneous parallel architectures for real-time active vibration control p625
Inversion of RBF networks and applications to adaptive control of nonlinear systems p617
Model-based compensation and comparison of neural network controllers for uncertainties of robotic arms p501
Multivariable adaptive control for a space station using genetic algorithms p81
Stable and fast neurocontroller for robot arm movement p378
Variable-speed drives incorporating interacting multiloop adaptive controllers p411
Variable structure based decentralised adaptive control p439

AEROSPACE SYSTEMS

Helicopter flight control using individual channel design p58
Multivariable adaptive control for a space station using genetic algorithms p81

CLOSED LOOP SYSTEMS

Design of PWM controller for sampled-data system using digitally redesigned PAM *controller p654*
Digital control system design for a unique nonlinear MIMO process using QFT technique p466
Optimal control with regional pole constraints via the mapping theory p638
Parametric approach for eigenstructure assignment in descriptor systems via output feedback p611
Real time identification of robot dynamic parameters using parallel processing. 2. Implementation and testing p369
Variable-speed drives incorporating interacting multiloop adaptive controllers p411
Variable structure based decentralised adaptive control *p439*

COMPUTER APPLICATIONS

Digital interval model conversion and simulation of continuous-time uncertain systems p315
DSP based integral variable structure control for DC motor servo drivers p444
Genetic algorithms for fuzzy control.1. Offline system development and application p161
Genetic algorithms for fuzzy control.2. Online system development and application p177
Heterogeneous and homogeneous parallel architectures for real-time active vibration *control p625*
Optimising individual control rules and multiple communicating rule-based control systems with parallel distributed genetic algorithms p211
Real time identification of robot dynamic parameters using parallel processing. 2. Implementation and testing p369

CONTROL SYSTEMS ANALYSIS

Adaptive control of dominant time delay systems via polynomial identification p433
Analysis, modelling-and control of an advanced automotive self-levelling suspension system p129
Application of decoupling method to Hamiltonian systems *p595*
Control system design issues for unstable linear systems with saturated inputs p335
Design of PWM controller for sampled-data system using digitally redesigned PAM controller p654
Digital control system design for a unique nonlinear MIMO process using QFT technique p466
Digital interval model conversion and simulation of continuous-time uncertain sys*tems p315*
Digital modelling and digital redesign of sampled-data uncertain systems p585
Direct neural control system: nonlinear extension of adaptive control p661
Discretisation of continuous-time control systems with guaranteed stability p323
Dynamic recurrent neural network for system identification and control p307
Efficient pole placement technique for linear time-variant SISO systems p451
Fuzzy logic control of an automotive suspension system p149
Helicopter flight control using individual channel design p58
Identification and dynamic weights for LQG control with integral action p647
Inverse Nyquist array: a quantitative theory p23
Linear switching controller convergence p329
Linearly pulse-width modulated block pulse functions and their application to linear SISO feedback control system identification p44
Model reduction via parameter matching using a Gramian technique p186
Multifrequency Routh approximants for linear systems p351
New frequency-domain design method for PID controllers p265
Optimal control with regional pole constraints via the mapping theory p638
Parameter estimation of state space models by recurrent neural networks p114
Parametric approach for eigenstructure assignment in descriptor systems via output *feedback p611*
Perfect output control for nonsquare generalised state space systems p119
Real time identification of robot dynamic parameters using parallel processing. 1. *Theory p359*
Redesign of robust controllers for rigid-link flexible-joint robotic manipulators actuated with harmonic drive gearing p508
Robust performance design of multivariable control systems p7
Solution of the bilinear matrix equation using Astrom-Jury-Agniel algorithm p603
Stability of time-delay singularly perturbed systems p111
Variable-speed drives incorporating interacting multiloop adaptive controllers p411
Variable structure based decentralised adaptive control p439

CONTROL SYSTEM SYNTHESIS

Adaptive control of dominant time delay systems via polynomial identification p433
Analysis, modelling-and control of an advanced automotive self-levelling suspension system p129
Control system design issues for unstable linear systems with saturated inputs *p335*
Design of PWM controller for sampled-data system using digitally redesigned PAM controller p654
Digital control system design for a unique nonlinear MIMO process using QFT tech*nique p466*
Digital modelling and digital redesign of sampled-data uncertain systems p585
Direct neural control system: nonlinear extension of adaptive control p661
Dynamic recurrent neural network for system identification and control p307
Fuzzy logic control of an automotive suspension system p149
New frequency-domain design method for PID controllers p265
Optimal control with regional pole constraints via the mapping theory p638
Redesign of robust controllers for rigid-link flexible-joint robotic manipulators actuated with harmonic drive gearing p508
Robust performance design of multivariable control systems p7
Variable-speed drives incorporating interacting multiloop adaptive controllers p411
Variable structure based decentralised adaptive control p439

CONVERTORS

Robust control of series parallel resonant converters p401

CYBERNETICS AND ROBOTICS

Application of decoupling method to Hamiltonian systems p595
Developing a neurocompensator for the adaptive control of robots p562
Friction compensation and robustness issues in force/position controlled manipula*tors p569*
Functional diagnosis and prescription of measurements using effort and flow variables p420
Fuzzy model based fault diagnosis p545
Mobile vehicle navigation in unknown environments: a multiple hypothesis approach p385
Model-based compensation and comparison of neural network controllers for uncertainties of robotic arms p501
Optimal path planning for a trolley crane: fast and smooth transfer of load p51
Process for diagnostic reasoning integrating uncertain and temporal information *p575*
Real time identification of robot dynamic parameters using parallel processing. 1. Theory p359
Redesign of robust controllers for rigid-link flexible-joint robotic manipulators actuated with harmonic drive gearing p508
Stable and fast neurocontroller for robot arm movement p378

DISCRETE SYSTEMS

Adaptive control of discrete systems using neural networks p526
Design of PWM controller for sampled-data system using digitally redesigned PAM *controller p654*
Digital interval model conversion and simulation of continuous-time uncertain systems p315
Digital modelling and digital redesign of sampled-data uncertain systems p585
Discretisation of continuous-time control systems with guaranteed stability p323
Identification and dynamic weights for LQG control with integral action p647
Multifrequency Routh approximants for linear systems p351
Multivariable system simplification using moment matching and optimisation p103
Optimal control with regional pole constraints via the mapping theory p638
Performance enhancement of limited-bandwidth active automotive suspensions by road preview p140
Solution of the bilinear matrix equation using Astrom-Jury-Agniel algorithm p603

DISTRIBUTED PARAMETER SYSTEMS

Adaptive control of dominant time delay systems via polynomial identification p433
Design of PWM controller for sampled-data system using digitally redesigned PAM controller p654
Heterogeneous and homogeneous parallel architectures for real-time active vibration control p625
Stability of time-delay singularly perturbed systems p111
Stability robustness bounds for linear systems with delayed perturbations p345

EXPERT SYSTEMS

Genetic algorithms for fuzzy control.1. Offline system development and application *p161*
Genetic algorithms for fuzzy control.2. Online system development and application p177
Hierarchical planning using abstraction p197
Model integration within a manufacturing simulation framework p216
Process for diagnostic reasoning integrating uncertain and temporal information *p575*

FEEDBACK

Application of decoupling method to Hamiltonian systems p595
*Digital control system design for a unique nonlinear MIMO process using QFT tech*nique p466
Efficient pole placement technique for linear time-variant SISO systems p451
Guaranteed cost LQG control of uncertain linear systems p95
Inversion of RBF networks and applications to adaptive control of nonlinear systems p617
Parametric approach for eigenstructure assignment in descriptor systems via output feedback p611
Polynomial solution of the standard H_∞ control problem for strip mill gauge control p515
Stable and fast neurocontroller for robot arm movement p378

FORMAL LOGIC

Fuzzy model based fault diagnosis p545
Genetic algorithms for fuzzy control.1. Offline system development and application p161
Genetic algorithms for fuzzy control.2. Online system development and application p177
Linguistic fuzzy model identification p537

FUZZY CONTROL

Fuzzy logic control of an automotive suspension system p149
Genetic algorithms for fuzzy control.1. Offline system development and application p161
Genetic algorithms for fuzzy control.2. Online system development and application p177

GENERATORS

DSP based integral variable structure control for DC motor servo drivers p444
Neural-network-based near-time-optimal position control method for DC motor servosystems p493
Variable-speed drives incorporating interacting multiloop adaptive controllers p411

INFORMATION THEORY

Bearings-only tracking using a set of range-parameterised extended Kalman filters p73
Centralised integration of multisensor noisy and fuzzy data p459
Control system design issues for unstable linear systems with saturated inputs p335
Design of multilevel multiharmonic signals for system identification p247
Generating piecewise-constant excitations with an arbitrary power spectrum p241
Identification and dynamic weights for LQG control with integral action p647
Identifying linear models of systems suffering nonlinear distortions, with a gas turbine application *p229*
Mobile vehicle navigation in unknown environments: a multiple hypothesis approach p385
Neural network approach to signal modelling in power systems p257
Optimal sampling interval for system identification based on decimation and interpolation p15

MATHEMATICAL TECHNIQUES

Bearings-only tracking using a set of range-parameterised extended Kalman filters p73
BPD computation and model reference adaptive control (MRAC) of Hammerstein plants p475
Centralised integration of multisensor noisy and fuzzy data p459
Digital interval model conversion and simulation of continuous-time uncertain systems *p315*
Direct neural model reference adaptive control p31
Efficient pole placement technique for linear time-variant SISO systems p451
Estimation of complex Fourier coefficients p253
Fuzzy neural networks for nonlinear systems modelling p551
Genetic algorithms for fuzzy control.1. Offline system development and application *p161*
Genetic algorithms for fuzzy control.2. Online system development and application p177
Guaranteed cost LQG control of uncertain linear systems p95
Helicopter flight control using individual channel design p58
Linearly pulse-width modulated block pulse functions and their application to linear SISO feedback control system identification *p44*
Linguistic fuzzy model identification p537
Multifrequency Routh approximants for linear systems p351
Multivariable adaptive control for a space station using genetic algorithms p81
Multivariable system simplification using moment matching and optimisation p103
Network-growth approach to design of feedforward neural networks p486
Neural-network-based near-time-optimal position control method for DC motor *servosystems p493*
Neural network modelling of a 200 MW boiler system p529
Optimal sampling interval for system identification based on decimation and interpolation p15
Optimising individual control rules and multiple communicating rule-based control systems with parallel distributed genetic algorithms p211
Parametric approach for eigenstructure assignment in descriptor systems via output feedback p611
Polynomial solution of the standard H_∞ control problem for strip mill gauge control p515
Solution of the bilinear matrix equation using Astrom-Jury-Agniel algorithm p603
System identification using partitioned least squares p223

MODULATION

Linearly pulse-width modulated block pulse functions and their application to linear SISO feedback control system identification p44

MULTIVARIABLE CONTROL SYSTEMS

Multivariable adaptive control for a space station using genetic algorithms p81
Multivariable system simplification using moment matching and optimisation p103
Robust performance design of multivariable control systems p7

NEURAL NETS

Adaptive control of discrete systems using neural networks p526
Developing a neurocompensator for the adaptive control of robots p562
Direct neural control system: nonlinear extension of adaptive control p661
Direct neural model reference adaptive control p31
Dynamic recurrent neural network for system identification and control p307
Fuzzy neural networks for nonlinear systems modelling p551
Inversion of RBF networks and applications to adaptive control of nonlinear systems p617
Model-based compensation and comparison of neural network controllers for uncertainties of robotic arms p501
Network-growth approach to design of feedforward neural networks p486
Neural network approach to signal modelling in power systems p257
Neural-network-based near-time-optimal position control method for DC motor *servosystems p493*
Neural network modelling of a 200 MW boiler system p529
Parameter estimation of state space models by recurrent neural networks p114
Stable and fast neurocontroller for robot arm movement *p378*

NONELECTRIC VARIABLES CONTROL

Active suspensions: some background p123
Bearings-only tracking using a set of range-parameterised extended Kalman filters *p73*
DSP based integral variable structure control for DC motor servo drivers p444
Friction compensation and robustness issues in force/position controlled manipulators *p569*
Fuzzy neural networks for nonlinear systems modelling p551
Heterogeneous and homogeneous parallel architectures for real-time active vibration control *p625*
Mobile vehicle navigation in unknown environments: a multiple hypothesis approach p385
Model-based compensation and comparison of neural network controllers for uncertainties of robotic arms p501
Multivariable adaptive control for a space station using genetic algorithms p81
Near-optimal productivity control of a continuous bioreactor *p633*
Neural-network-based near-time-optimal position control method for DC motor servosystems p493
Optimal path planning for a trolley crane: fast and smooth transfer of load p51
Polynomial solution of the standard H_∞ control problem for strip mill gauge control p515
Stable and fast neurocontroller for robot arm movement p378
Variable-speed drives incorporating interacting multiloop adaptive controllers p411

NONLINEAR CONTROL SYSTEMS

Application of decoupling method to Hamiltonian systems p595
Dynamic recurrent neural network for system identification and control p307
Fuzzy neural networks for nonlinear systems modelling p551
Near-optimal productivity control of a continuous bioreactor p633
Nonlinear control design for a Hammerstein model system p277
Stable and fast neurocontroller for robot arm movement p378

OPTIMAL CONTROL

Guaranteed cost LQG control of uncertain linear systems p95
Identification and dynamic weights for LQG control with integral action p647
Linear switching controller convergence p329
Mixed objective constrained stable generalised predictive control p286
Near-optimal productivity control of a continuous bioreactor p633
Neural-network-based near-time-optimal position control method for DC motor servosystems p493
Optimal control with regional pole constraints via the mapping theory p638
Optimal path planning for a trolley crane: fast and smooth transfer of load p51
Partially asynchronous co-state prediction algorithm p88
Performance enhancement of limited-bandwidth active automotive suspensions by road preview p140
Polynomial solution of the standard H_∞ control problem for strip mill gauge control p515
Robust control of series parallel resonant converters p401
Robustness bounds for continuous systems with LQ regulators p272
Stability of time-delay singularly perturbed systems p111
Two-degree-of-freedom linear quadratic Gaussian predictive control p295

OPTIMISATION

Multivariable system simplification using moment matching and optimisation p103
Network-growth approach to design of feedforward neural networks p486
Optimal sampling interval for system identification based on decimation and interpolation p15

PARALLEL PROCESSING

Heterogeneous and homogeneous parallel architectures for real-time active vibration control p625
Optimising individual control rules and multiple communicating rule-based control systems with parallel distributed genetic algorithms p211

PARAMETER ESTIMATION

Adaptive control of dominant time delay systems via polynomial identification p433
Digital control system design for a unique nonlinear MIMO process using QFT technique p466
Estimation of complex Fourier coefficients p253
Parameter estimation of state space models by recurrent neural networks p114
Real time identification of robot dynamic parameters using parallel processing. 1. Theory p359
Study of a bias-free least squares parameter estimator p1
System identification using partitioned least squares p223
Variable-speed drives incorporating interacting multiloop adaptive controllers p411

PATTERN RECOGNITION

Model reduction via parameter matching using a Gramian technique p186
Neural-network-based near-time-optimal position control method for DC motor servosystems p493

POWER ELECTRONICS

Robust control of series parallel resonant converters p401

POWER SYSTEM CONTROL

DSP based integral variable structure control for DC motor servo drivers p444
Fuzzy model based fault diagnosis p545
Identifying linear models of systems suffering nonlinear distortions, with a gas turbine application p229
Neural-network-based near-time-optimal position control method for DC motor servosystems p493
Neural network modelling of a 200 MW boiler system p529
Robust control of series parallel resonant converters p401
Variable-speed drives incorporating interacting multiloop adaptive controllers p411

POWER SYSTEMS AND APPLICATIONS

DSP based integral variable structure control for DC motor servo drivers p444
Variable-speed drives incorporating interacting multiloop adaptive controllers p411

POWER SYSTEMS AND PLANTS

DSP based integral variable structure control for DC motor servo drivers p444
Neural network approach to signal modelling in power systems p257
Neural network modelling of a 200 MW boiler system p529
Variable-speed drives incorporating interacting multiloop adaptive controllers p411

PREDICTIVE CONTROL

Adaptive control of dominant time delay systems via polynomial identification p433
Mixed objective constrained stable generalised predictive control p286
Performance enhancement of limited-bandwidth active automotive suspensions by road preview p140
Two-degree-of-freedom linear quadratic Gaussian predictive control p295

PROBABILITY AND STATISTICS

Neural-network-based near-time-optimal position control method for DC motor servosystems p493
Neural network modelling of a 200 MW boiler system p529

PRODUCTION ENGINEERING

Fuzzy neural networks for nonlinear systems modelling p551
Model integration within a manufacturing simulation framework p216
Near-optimal productivity control of a continuous bioreactor p633
Optimising individual control rules and multiple communicating rule-based control systems with parallel distributed genetic algorithms p211
Polynomial solution of the standard H_∞ control problem for strip mill gauge control p515

SELF-ADJUSTING SYSTEMS

Adaptive control of discrete systems using neural networks p526
Adaptive control of dominant time delay systems via polynomial identification p433
Analysis, modelling-and control of an advanced automotive self-levelling suspension system p129
BPD computation and model reference adaptive control (MRAC) of Hammerstein plants p475
Developing a neurocompensator for the adaptive control of robots p562
Direct neural control system: nonlinear extension of adaptive control p661
Direct neural model reference adaptive control p31
Genetic algorithms for fuzzy control.2. Online system development and application p177
Heterogeneous and homogeneous parallel architectures for real-time active vibration control p625
Inversion of RBF networks and applications to adaptive control of nonlinear systems p617
Model-based compensation and comparison of neural network controllers for uncertainties of robotic arms p501
Multivariable adaptive control for a space station using genetic algorithms p81
Stable and fast neurocontroller for robot arm movement p378
Variable-speed drives incorporating interacting multiloop adaptive controllers p411
Variable structure based decentralised adaptive control p439

SIGNAL PROCESSING

Centralised integration of multisensor noisy and fuzzy data p459
Linearly pulse-width modulated block pulse functions and their application to linear SISO feedback control system identification p44
Neural network approach to signal modelling in power systems p257

SIMULATION, MODELLING AND IDENTIFICATION

Adaptive control of dominant time delay systems via polynomial identification p433
Bearings-only tracking using a set of range-parameterised extended Kalman filters p73
Design of multilevel multiharmonic signals for system identification p247
Digital control system design for a unique nonlinear MIMO process using QFT technique p466
Digital modelling and digital redesign of sampled-data uncertain systems p585
Dynamic recurrent neural network for system identification and control p307
Estimation of complex Fourier coefficients p253
Fuzzy model based fault diagnosis p545
Fuzzy neural networks for nonlinear systems modelling p551
Generating piecewise-constant excitations with an arbitrary power spectrum p241
Guaranteed cost LQG control of uncertain linear systems p95
Heterogeneous and homogeneous parallel architectures for real-time active vibration control p625
Identification and dynamic weights for LQG control with integral action p647
Identifying linear models of systems suffering nonlinear distortions, with a gas turbine application p229
Linguistic fuzzy model identification p537
Multivariable adaptive control for a space station using genetic algorithms p81
Neural network approach to signal modelling in power systems p257
Neural network modelling of a 200 MW boiler system p529
Nonlinear control design for a Hammerstein model system p277
Optimal sampling interval for system identification based on decimation and interpolation p15
Parameter estimation of state space models by recurrent neural networks p114
Real time identification of robot dynamic parameters using parallel processing. 1. Theory p359
Robust control of series parallel resonant converters p401
Study of a bias-free least squares parameter estimator p1
System identification using partitioned least squares p223
Variable-speed drives incorporating interacting multiloop adaptive controllers p411

STABILITY

Application of decoupling method to Hamiltonian systems p595
BPD computation and model reference adaptive control (MRAC) of Hammerstein plants p475
Control system design issues for unstable linear systems with saturated inputs p335
Developing a neurocompensator for the adaptive control of robots p562
Digital control system design for a unique nonlinear MIMO process using QFT technique p466
Digital modelling and digital redesign of sampled-data uncertain systems p585
Direct neural control system: nonlinear extension of adaptive control p661
Discretisation of continuous-time control systems with guaranteed stability p323
Efficient pole placement technique for linear time-variant SISO systems p451
Friction compensation and robustness issues in force/position controlled manipulators p569
Guaranteed cost LQG control of uncertain linear systems p95
Helicopter flight control using individual channel design p58
Inverse Nyquist array: a quantitative theory p23
Inversion of RBF networks and applications to adaptive control of nonlinear systems p617
Linear switching controller convergence p329
Mixed objective constrained stable generalised predictive control p286
Multifrequency Routh approximants for linear systems p351
Multivariable adaptive control for a space station using genetic algorithms p81
Multivariable system simplification using moment matching and optimisation p103
Nonlinear control design for a Hammerstein model system p277
Optimal control with regional pole constraints via the mapping theory p638
Redesign of robust controllers for rigid-link flexible-joint robotic manipulators actuated with harmonic drive gearing p508
Robust control of series parallel resonant converters p401
Robust performance design of multivariable control systems p7
Robustness bounds for continuous systems with LQ regulators p272
Solution of the bilinear matrix equation using Astrom-Jury-Agniel algorithm p603
Stability of time-delay singularly perturbed systems p111
Stability robustness bounds for linear systems with delayed perturbations p345
Two-degree-of-freedom linear quadratic Gaussian predictive control p295
Variable structure based decentralised adaptive control p439

SYSTEMS THEORY

Application of decoupling method to Hamiltonian systems p595
Bearings-only tracking using a set of range-parameterised extended Kalman filters p73
BPD computation and model reference adaptive control (MRAC) of Hammerstein plants p475
Digital control system design for a unique nonlinear MIMO process using QFT technique p466
Direct neural control system: nonlinear extension of adaptive control p661
Direct neural model reference adaptive control p31
DSP based integral variable structure control for DC motor servo drivers p444
Dynamic recurrent neural network for system identification and control p307
Fuzzy neural networks for nonlinear systems modelling p551
Genetic algorithms for fuzzy control.1. Offline system development and application p161
Genetic algorithms for fuzzy control.2. Online system development and application p177
Helicopter flight control using individual channel design p58
Hierarchical planning using abstraction p197
Inverse Nyquist array: a quantitative theory p23
Inversion of RBF networks and applications to adaptive control of nonlinear systems p617
Linear switching controller convergence p329
Linguistic fuzzy model identification p537
Model-based compensation and comparison of neural network controllers for uncertainties of robotic arms p501
Model reduction via parameter matching using a Gramian technique p186
Multivariable adaptive control for a space station using genetic algorithms p81
Multivariable system simplification using moment matching and optimisation p103
Near-optimal productivity control of a continuous bioreactor p633
Nonlinear control design for a Hammerstein model system p277
Partially asynchronous co-state prediction algorithm p88
Robust performance design of multivariable control systems p7
Solution of the bilinear matrix equation using Astrom-Jury-Agniel algorithm p603
Stable and fast neurocontroller for robot arm movement p378
Variable structure based decentralised adaptive control p439

TIME-VARYING SYSTEMS

Efficient pole placement technique for linear time-variant SISO systems p451
Linearly pulse-width modulated block pulse functions and their application to linear SISO feedback control system identification p44
Stability robustness bounds for linear systems with delayed perturbations p345
